Level 3

Topic 7. Teaching the Next Generation

Part 1: Opening

Alex: Hello everyone, welcome to this episode of the MAGA Academy, we're talking about teaching the next generation to invest-with curiosity, confidence, and a heart for helping others.

Charlie: And parents, grandparents, and caregivers-you don't need to have every answer to begin. Learning together can be one of the most valuable parts of this journey.

Alex: The MAGA Academy lessons give you a starting point. You can watch a video together, pause when something sparks an interest, and ask, "What do you think about that?"

Charlie: We want young people to see themselves as future builders and stewards. Now, let’s talk about when these conversations can begin. By welcoming their ideas, choices, and resources, we can help shape the future world they will be living in—while actively following and supporting their core interests.

Part 2: Core Content

Point 1: Starting Early and Following Their Core Interests

Charlie: Start early, with ideas children can understand.

Alex: And follow their interests! A child who loves animals might enjoy learning about farming or conservation. Where a child who loves games might be curious about software, or the technology behind their favorite experiences.

Charlie: Ask, "What problem would you like to solve?" Then explore the projects and technologies in this space. That gives investing a personal connection.

Alex: Help encourage their unique interests by guiding and supporting them through this truly beautiful experience.

Now, when working with older children and teens, the Academy offers several key videos that are great for adults to watch alongside them. These suggested lessons break down big concepts, like how real world changes affect daily life, To start exploring these together, head over to Level 1 Foundations.

A gentle way to start is by watching the video on the topic 'What This Change Means for Everyday People.' It's a friendly way to bring up the subject and talk together about how these updates touch your family's daily life.

Charlie: These next two videos break down big concepts into easy to understand lessons that set them up for long-term success. next topic being'Four Safe and Gentle Ways to Begin Investing" and, the topic "The Absolute Basics of Risk Management", Ask, "What would we want to understand before investing in a project?"

Point 2: Foundations, Digital Wallet Safety, and Practical Research

Alex: Then you can explore with your family, Level 2: Digital Wallet Fundamentals. Discuss what a wallet does, how to protect private information, and why it's important to check details before making a transaction.

Charlie: Let them explain what they learned in their own words. Use demonstrations or examples first, with adults overseeing any real investments.

Point 3: Gamified Exploration, Cutting-Edge Tech, and Global Vision

Alex: Now bring those foundations into our Level 3 lessons. Start with the video topic "Sectors and Subsectors." It helps young people connect everyday interests with the wider economy.

Charlie: Make it a game! Pick something exciting, a flying car, teleporter and medbed-and explore the different projects needed to create it.

Alex: Then watch a video such as "Where to Start Your Research." Choose a topic that interests them and investigate together. What does the project actually do? Who does it help? and, where is the project based?

Charlie: Encourage them to ask questions on topics they are interested in. Curiosity helps us discover possibilities, and research helps us understand them.

Alex: When you're ready to explore new horizons together, A simple way to introduce them to new ideas is by watching the video, 'How to Invest in Quantum Technology.' It gives their imagination room to grow and lets you watch their faces light up. They may ask questions like "If this actually works, how is it going to change things for us?? or What is possible? and what is being developed?

Charlie: After dreaming about what's next, watch 'Across the World, Investing in the Golden Age' to discover the bright future unfolding right now. Explore how different countries contribute through agriculture, manufacturing, energy, technology, and other resources.

Alex: Let each child choose a country or innovation to learn more about.

Charlie: Pick a region on the map. What is one major improvement or new technology that could solve a daily challenge for families in that community?

Point 4: Family Practice Portfolios and Mindsets of Abundance

Charlie: And then, After watching the video, "Building a Diversified Portfolio," you can create a family practice portfolio.

Alex: Each person can choose an area they care about and explain their reasoning. One might explore food production, another, technology, and another, energy.

Charlie: Discuss why spreading investments across different areas is more exciting and helps expands your thinking.

Alex: Keep a simple journal: What did we choose? What have we learned? Would we make the same choice again today?

Charlie: Celebrate a thoughtful question or a well-researched decision.Those are achievements, no matter what.

Alex: Next, Watch the video, "Investing with an Abundance Mindset". then, talk about what abundance means to your family.

Charlie: It might mean nutritious food, dependable energy, more opportunities to learn, or more time to create and care for others.

Alex: Ask, If you could help improve one thing in your community, what would it be?

Charlie: Then explore how investing, entrepreneurship, volunteering, and giving might each contribute. A project can have a wonderful purpose, and it is great for the entire family to know how it works.

Point 5: Overcoming Common Doubts and Cultivating Ongoing Habits

Alex: What if a parent feels they don't know enough to teach investing?

Charlie: Say, "Let's learn together." Choose one Maga Academy video, write down your questions, and look for reliable answers. You're showing your children how to learn thoughtfully.

Alex: What if my child isn't interested in investing?

Charlie: The focus does not need to be investing. Talk about topics that interests them and that they already love. Whether that is art, sport, animals, technology or something else. Keep the conversation relaxed and give their curiosity room to grow.

Alex: How can families make this an ongoing habit?

Charlie: Try a short family discovery night. Watch one video, let everyone share something interesting, and choose one question to explore next. Listen to their ideas—you may discover something together that none of you expected.

Part 3: Summary

Alex: The next generation has extraordinary possibilities ahead—from quantum discoveries and new energy technologies to better food systems and innovations we have not even thought of yet.

Charlie: Give them room to dream, tools to research, and opportunities to practice. Help them ask, “What could we build? How could it work? Who could it help?”

Alex: Choose a MAGA Academy video, watch it together, and start that conversation today.

Charlie: Their curiosity could become tomorrow’s breakthrough. Thank you for joining us at the MAGA Academy.

Alex: Remember you can stop and watch this video as many times as you want. The conversations we begin at home can help raise thoughtful adults, creative builders, and caring stewards of a brighter Golden Age.
