Level 3

Topic 7. Teaching the Next Generation

Point 1: Starting Early and Following Their Core Interests

Explains that parents, grandparents, and caregivers do not need to have all the answers to begin teaching the next generation about investing. Discover how starting early with simple concepts and following a child's natural curiosity—whether in animals, gaming, or technology—gives investing a meaningful, personal connection.

Point 2: Foundations, Digital Wallet Safety, and Practical Research

Explores age-appropriate entry points across Level 1 and Level 2, moving from foundational video discussions to digital wallet security and hands-on practice. Learn how to guide young people to investigate project basics, understand risk management, protect private details, and explain concepts in their own words under adult supervision.

Point 3: Gamified Exploration, Cutting-Edge Tech, and Global Vision

Demonstrates how to turn research into an engaging game by linking everyday interests to sectors, quantum technology, and international innovation. Discover how exploring exciting future concepts —like advanced tech or global contributions in agriculture and energy—helps children understand real-world problem-solving and expanding horizons.

Point 4: Family Practice Portfolios and Mindsets of Abundance

Highlights how families can build mock portfolios together, maintain a simple decision journal, and celebrate thoughtful questions over profits. Learn how to introduce an abundance mindset by connecting investing, entrepreneurship, volunteering, and giving to real community improvements and shared family values.

Point 5: Overcoming Common Doubts and Cultivating Ongoing Habits

Emphasizes simple strategies for parents who are still learning or dealing with disinterested children by encouraging a "let's learn together" approach. Learn how short, low-pressure family discovery nights and open conversation give the next generation room to dream, research, and grow into thoughtful stewards of the future.
