Note: The payment methods may be different under each provider.

Step 5. Select a payment method

WHAT IS A TRUSTLINE

What is a Trustline

Key Stellar Asset Terms

Essential concepts for issuing and managing assets

Trustline

A trustline tells your wallet to accept a specific token. Without it, the token cannot be delivered.

Asset Code

A short identifier (1–12 characters) that uniquely labels an asset.

Domain Name

The domain name looks like a normal website address.

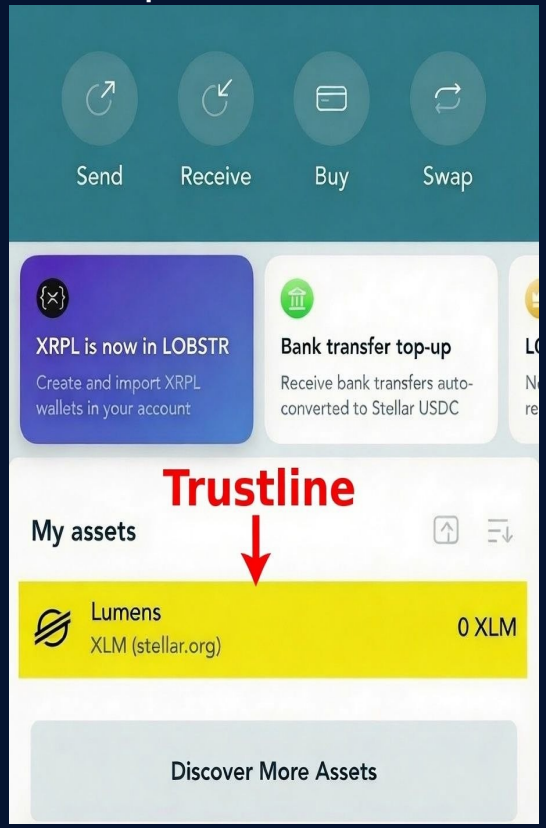

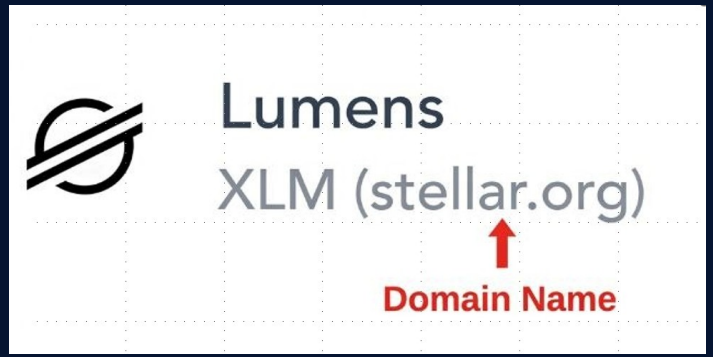

Issuer Address

A 56-character unique public wallet address belonging to the account that originally created and issued the asset.

Cont. What is a Trustline

A Trustline is made up of three parts

A Domain name

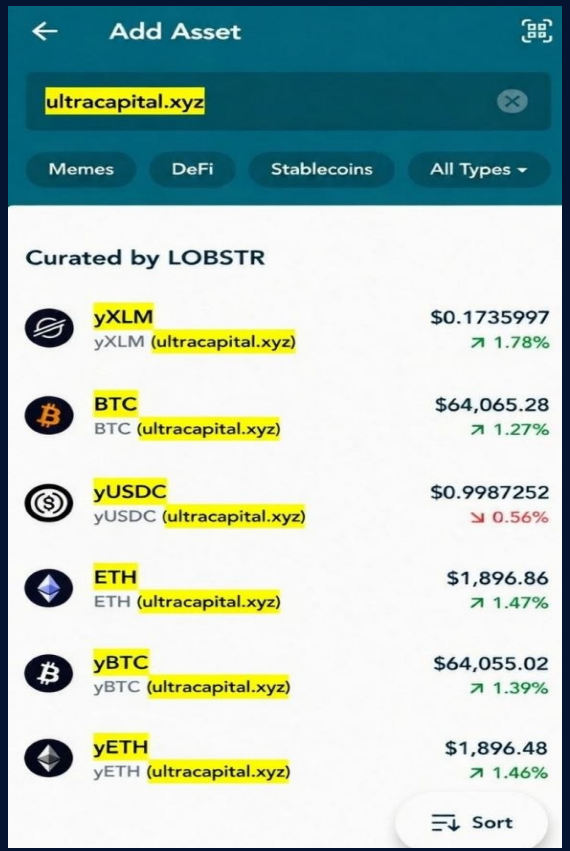

An Asset Code

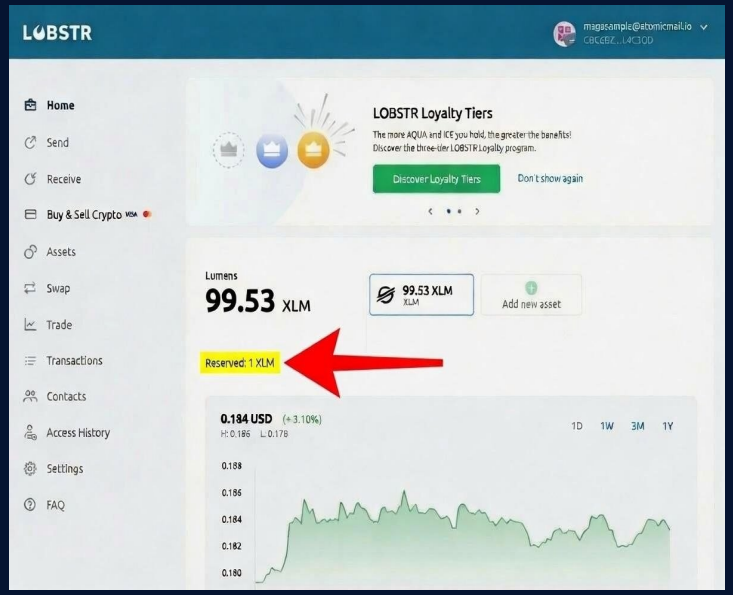

An Issuer Address

cont. What is a Trustline

A single domain can host multiple asset codes with multiple issuer numbers

On the Stellar network, each wallet holds one XLM in reserve, and your wallet holds half an XLM in reserve for each trustline you add.

So, before you start adding trustlines, always make sure your wallet has enough spare XLM available to easily cover every trustline you want to add.

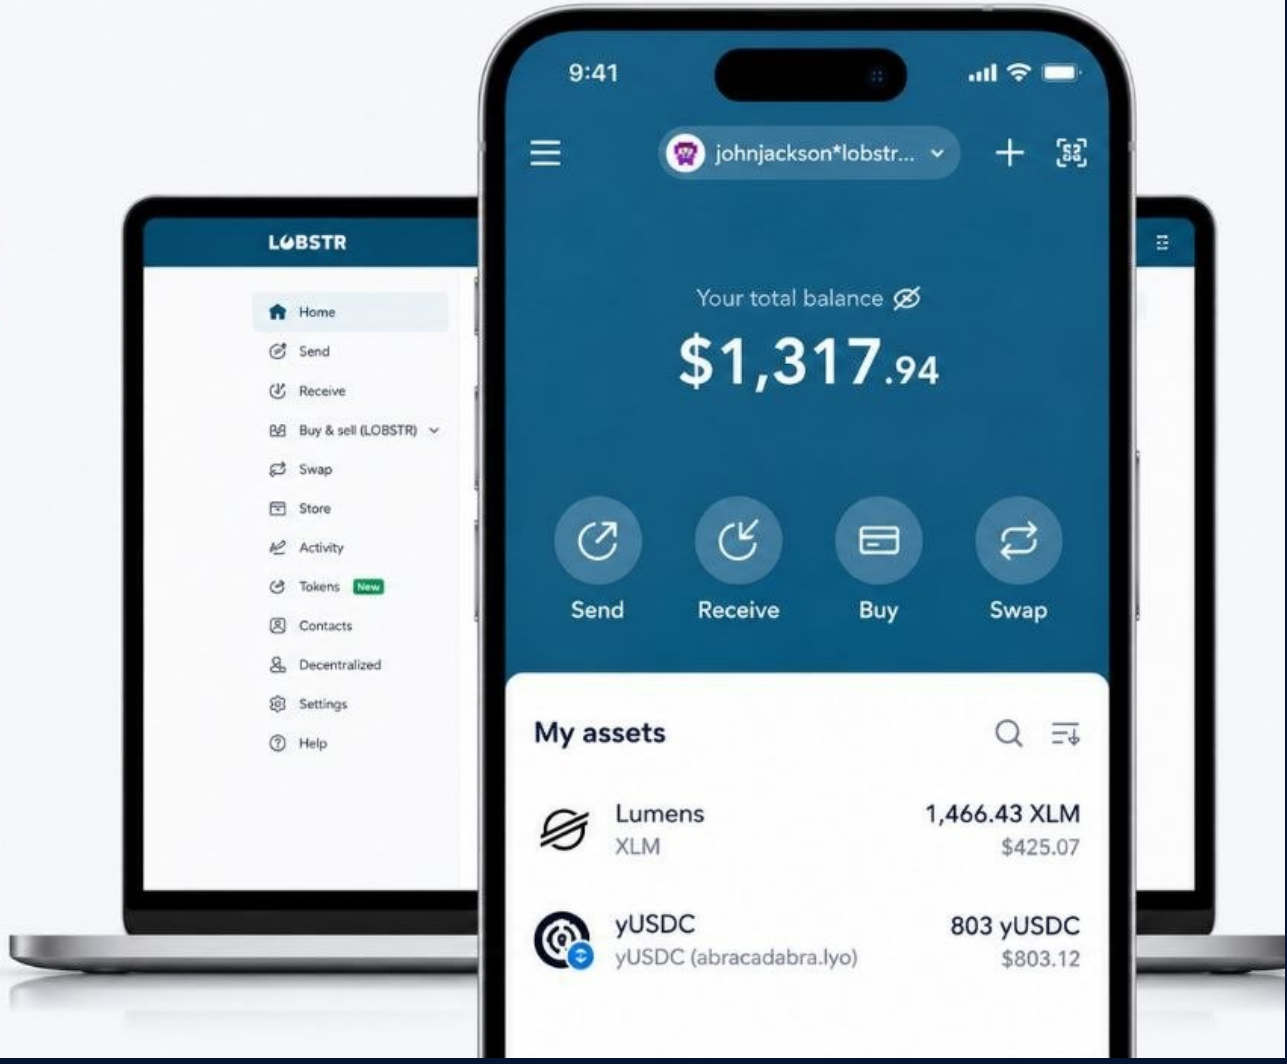

ADDING A TRUSTLINE

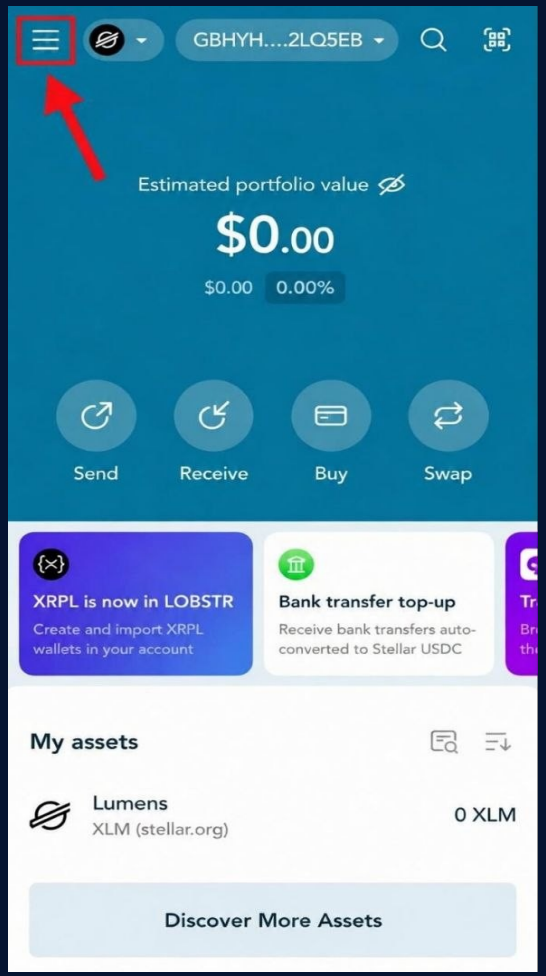

LOBSTR

Simple. Secure. Stellar.

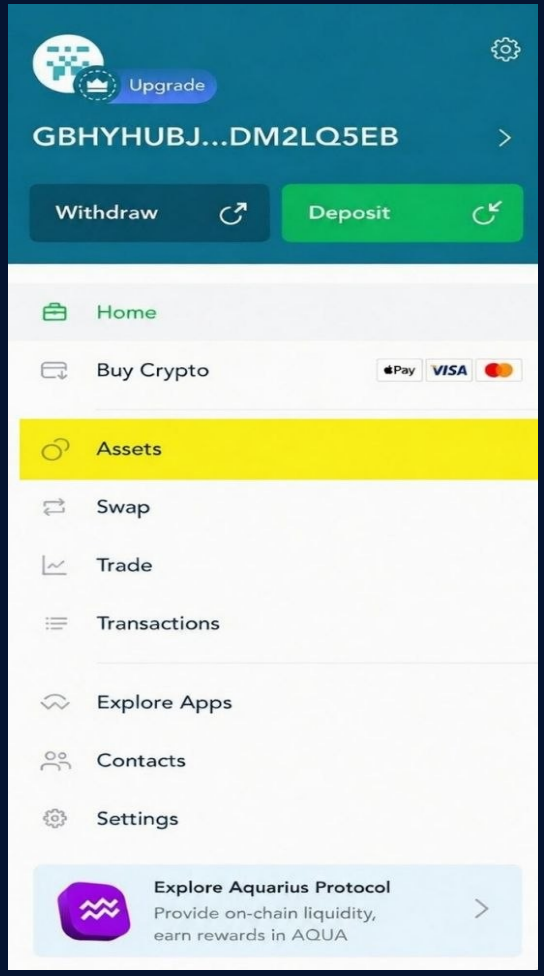

Send, receive and manage your Stellar assets with ease.

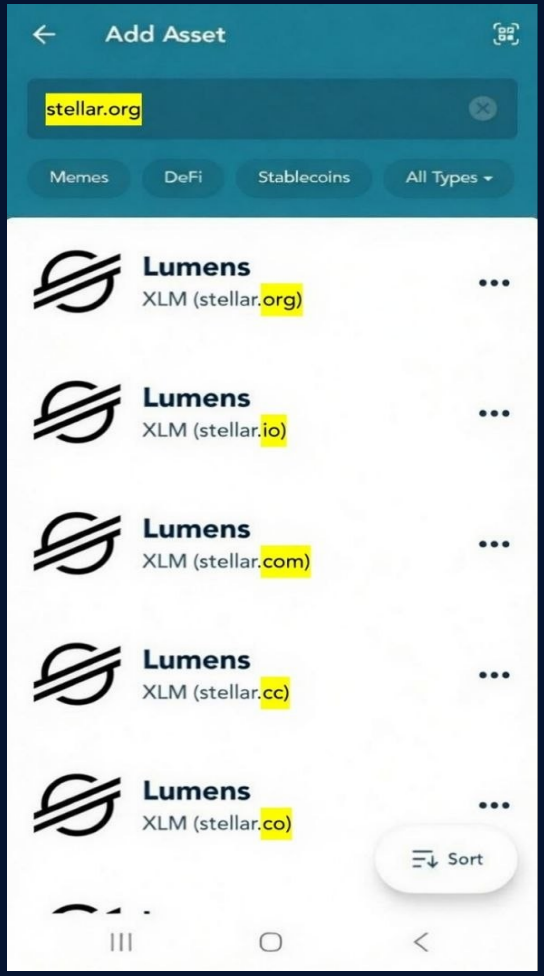

Adding a Trustline
